Anesthesia Service in conjunction with Biomed Inspection	\$225.00	\$175.00

Contract Service is a minimum of 2 inspections in one year. MES does not provide contract service on requests of once a year safety inspections. MES will provide will-call non-contract service for facilities that desire one a year safety inspections. Most facilities have equipment greater than (7) years old. Safety test measurements made during the inspection can reduce hazards by uncovering early signs of degradation. Equipment greater than (7) years old may no longer be supported by the manufacturer and have a greater failure rate. MES considers one a year safety testing not in the patients/equipment best interest. In twenty plus of service, statistically, facilities that perform only once a year safety inspections have more safety incidences with average of equipment greater than 7 years. Legal liability concerns may preclude some facilities from service.

For Clients not in compliance with service agreement payment terms, MES reserves the right to not honor requests as per service agreement terms. All non-contract service must be approved with a FAX work order authorization.
